COURSE TITLE:	CAD Basics 1
LECTURER'S NAME:	Tomasz Dąbrowski
E-MAIL ADDRESS OF THE LECTURER:	tomasz.dabrowski@tu.koszalin.pl
ECTS POINTS FOR THE COURSE:	2
COURSE CODE (USOS):	0511>0000E+CADB1
ACADEMIC YEAR:	2023/2024
SEMESTER: (W – winter, S – summer)	W
HOURS IN SEMESTER:	30
LEVEL OF THE COURSE: (1 st cycle, 2 nd cycle, 3 rd cycle)	1st cycle
TEACHING METHOD: (lecture, laboratory, group tutorials, seminar, other-what type?)	Computer laboratory
LANGUAGE OF INSTRUCTION:	English, Polish, (separate group with English depends from number of the incoming students)
ASSESSMENT METHOD: (written exam, oral exam, class test, written reports, project work, presentation, continuous assessment, other – what type?)	Continuous assessment
COURSE CONTENT:	The course is an introduction to CAD. It shows Elements of interface and communication with the program. Essential functions creating objects, hatching, and precise drawing are discussed. Then functions for modifying created objects are presented. Layers and operations on them, properties of objects and methods of their adjusting, processes using blocks, and dimensioning of objects are discussed.

COURSE CONTENT:	Basic properties of wood. Checking the limit states with the method of partial factors. Structure load and serviceability classes. The design strength of the timber. ULS states: tension, compression, pressure, bending, shear, and complex state of stresses. Stability of elements: columns in compression and compression with bending, beams bent and bending with compression. SLS states: slips in joints, beam deflections, flexible joints. Uniform and complex beams with flexible connectors: principles of calculation and construction. Principles of forming joints and calculating metal fittings. The transverse load capacity of the dowel pins. Uniform and complex columns: internal and external ties, principles of calculation and construction. Purlins. Truss girders, additional stresses and deflections: principles of construction and calculations. Structures made of glued laminated timber: beams, arches and frames. Composite sections of timber and wood-based materials. Beams with thin webs. Bracing of timber structures: calculations and construction. Fire resistance of wooden structures. Impregnation of sawn timber.

COURSE CONTENT:	Diversity and history of microorganisms. Cell structure and organization of bacteria, fungi and protista. Viruses – viral structure, replication cycles, states of viral infections. Microbial metabolism: enzymes, catabolic and anabolic reaction, aerobic respiration, fermentation and anaerobic respiration, type of metabolism: chemoorganotrophy =heterotrophy, chemolithotrophy, phototrophy. The share of microorganisms in the circulation of matter and energy flow - biogeochemical cycles of carbon, nitrogen, and phosphorus in water ecosystems. Ecological groups of aquatic organisms and their importance in maintaining homeostasis of reservoirs. Eutrophication of lakes, mechanisms, "vicious circle", toxic cyanobacterial blooms and the related threats to human life and health. Organisms inhabiting industrial water installations and water treatment devices. The role of microorganisms in forming biofilms on abiotic surfaces of the water distribution system and air conditioning equipment. Waterborne diseases and pathological agents in soil and air. Biological processes in wastewater treatment - the activated sludge method.

COURSE CONTENT:	<p>Sterilization and disinfection methods. Microbiological media. Macroscopic evaluation of the morphology of bacterial colonies on the culture medium. Procedures for preparing microscopic slides; simple and complex staining methods; microscopic observation using a light microscope. Determination of physiological and biochemical properties of bacteria by using media and API kit for identification. Microbiological analysis of water and air samples; estimation of a number of colony forming units (CFU) of bacteria and fungi; estimation of the most probable number (MPN) of bacteria and estimation of cell number by membrane filtration in the water samples. Assessment of the sanitary condition of the air in the tested rooms. Test methods for selected indicators of faecal contamination: coliform bacteria and faecal streptococci used to monitor tap water. Activated sludge biocenosis - microscopic analysis. Microscopic analysis of plant cell structure. Phytoplankton, zooplankton, zoobenthos - structure and importance for the functioning of a water reservoir, selected indicator species. Sanitary threats caused by parasites – the way of infection.</p>

COURSE CONTENT Threats for the Natural Environment:	Basic concepts related to technology and protection of the natural environment. The condition of the natural environment in Poland and the world. The science of modern ecological packaging. The problem of global warming and climate change. The decline of biodiversity and extinction of species. Impact of nutrients (nitrogen and phosphorus) on the natural environment. Threats to the forest environment. Water shortage problems. Environmental problems and health effects. The impact of demographic changes on the degradation of the natural environment. The legal aspect of the protection of the natural environment. Economic aspects of the protection of the natural environment. New concepts and technologies in the protection of the natural environment.
COURSE CONTENT Principles of the Environment Protection:	The main objectives of the protection of the natural environment. Characteristics and potential threats to terrestrial ecosystems. Characteristics and potential threats to aquatic ecosystems. Air protection - goals and methods of protection. Basics of waste management. Sewage management. The condition of the natural environment in Poland and the world. Contemporary threats to the natural environment. The problem of global warming and climate change. Biodiversity decline. Environmental degradation
